

Responding to the Needs of the Person with Alzheimer's Disease

A Bergen County Caregiver Conference

There are many complex issues and difficult decisions that caregivers may face while providing care for individuals with Alzheimer's disease and other related dementias. This workshop will focus on some of the care management questions families frequently ask. Presentations will include practical information and resources to help caregivers become more effective health care advocates.

Dr. Bennett Leifer will provide an overview of the disease and discuss care strategies to address some of the challenging behaviors related to the mid and late stages of the disease, the role of medications, and goals of care.

Janet Lurie, CELA will share an in-depth look at the essential requirements of legal and financial planning.
